

Enable Flash For Chem21Labs

Chrome

To enable Flash for all websites, open your Chrome browser and type <chrome://settings/content> in the address bar, then press Enter. Then on the **Content Settings** page, scroll down to Flash and click the arrow to the right. Select the button next to '**Allow sites to run Flash**'.

Internet Explorer

In the top right corner open Settings  (. . . icon)

Then, click Settings > View Advanced Settings > Use Adobe Flash Player is set to "ON".

Firefox

Click the  Open Menu in the upper right corner of Firefox. Click the Add-ons

icon. Select Plugins. In the list of Add-ons, look for Shockwave Flash (another name for Flash Player). Select Always Activate. Close the dialog box.

Safari

For macOS X 10.10 and 10.11, and macOS 10.12, open Safari, and choose Safari > Preferences. Click the Security tab. Ensure that Enable JavaScript and Allow Plug-ins are selected. Click Plug-in Settings. Select Adobe Flash Player. From the **When visiting other websites** menu, choose On, and then click Done. For each website appearing in Currently Open Websites, choose On in the menu on the right.
